

Assingment 3 – Form Controls (40 points)

Description:

Create a valid html page with a form on it that submits the data to the provided processing script.

Processing Script URL: <http://libertyville.rice.iit.edu/scripts/process.php>

Requirements:

Use the POST method for your form

Use the following controls in your form.

- Single line text inputs (4)

- Multi line textarea (1)

- Menu control: drop-down or multiple select (1)

- Set of radio buttons (1 grouping of multiple buttons)

- Set of checkboxes (1 grouping of checkboxes)

- Hidden field (1)

- Proper Labels on all the controls

- Use at least one fieldset & legend on the form surrounding some controls

Form needs to gather the following data.

- First Name

- Last Name

- Phone Number

- Email Address

- menu, radio buttons, checkboxes, hidden, and textarea are up to you how you label the content.

Form processing script expects the controls to have the following name attributes.

- first_name

- last_name

- phone

- email

- message

- radio

- checkbox[]

- menu[]

- hidden

Save your document as ***yourIITLogin_form.html*** and upload to blackboard under assignment 3.

Points will be deducted for invalid markup, missing requirements, a form that does not post data to the script in its entirety, broken forms.

CSS styling of the forms is not required. Try to structure the form with proper html and let the browser format with its default styling. If you know css you may use it but don't let that take away from the proper structure and functionality of the form.

Due February 23 – 23:59 Chicago Time
No late work accepted
